**INCISIVE SURGICAL TO SHOWCASE INSORB ABSORBABLE SKIN STAPLER AT
PREMIER, INC. ANNUAL BREAKTHROUGHS CONFERENCE**

MINNEAPOLIS, June 24 – The INSORB®|30 Absorbable Subcuticular Skin Stapler is one of the exciting new medical innovations that was showcased in front of thousands of healthcare providers at Premier, Inc.'s 2015 Breakthroughs Conference and Exhibition in National Harbor, Maryland on June 23.

Incisive Surgical's INSORB Absorbable Subcuticular Skin Stapler was debuted during the conference's seventh annual Innovation Celebration. The event recognizes advances in healthcare while highlighting industry suppliers committed to innovation and improving patient outcomes.

"Incisive Surgical shares Premier's commitment to providing valuable products to our alliance members that are safe, high-quality and cost-effective," said Durrall R. Gilbert, president of supply chain services, Premier. "We believe these innovations can benefit providers as they work to transform healthcare."

Clinicians and other health system members of Premier selected INSORB Absorbable Subcuticular Skin Stapler to be showcased at the Innovation Celebration due to its uniqueness, ability to have an impact on unmet clinical needs and potential to improve patient care.

The unique INSORB Absorbable Skin Stapling Technology is a revolutionary new skin closure technology that places an *absorbable* staple entirely underneath the skin to close surgical incisions. Patients now have a more comfortable, convenient and cosmetic choice for rapid skin closure. This proprietary device has been recognized with several national awards, including the 2006 *Wall Street Journal* Technology Innovation of the Year Award for medical devices and the 2014 Global Frost & Sullivan Award for Customer Value Leadership. Incisive Surgical is the only company in the world that offers this technology. Over 1,500,000 INSORB Absorbable Skin Staplers have been sold throughout the world since the product launch in January 2005, and the Company estimates that over 100,000 cesarean sections were closed with the INSORB Stapler in 2014.

The INSORB Absorbable Skin Stapler offers the speed of metal skin staplers with the cosmetic results and comfort of absorbable sutures. The INSORB Stapler uses bioabsorbable staples that are placed underneath the skin and dissolve in the body within a matter of months. The staples, which are comprised of the same material as the leading bioabsorbable sutures, break down naturally, thereby eliminating the anxiety, pain, cost and inconvenience of post-operative metal staple removal.

"We are honored to be acknowledged by Premier for our innovative patient-centric, cost effective revolutionary skin closure modality," said John L. Shannon, Jr., president and chief executive officer of Incisive Surgical. "This annual recognition program is further testimony to Premier's perpetual dedication to providing its partners with 'breakthrough' technology."

Any supplier, regardless of whether the company is contracted with Premier, can be considered for participation in the Innovation Celebration. Premier contracts with more than 1,100 suppliers.
